

The perfect balance between hardness and toughness!

Ground excellence worldwide

For Bellota, the key to quality for all its agricultural machinery spare parts is the perfect balance between hardness and toughness, the uniformity and perfect reproduction of the challenging specifications for the 8 million product units that it produces every year.

It is easy to create a part with great hardness, but that is no good if it is likely to break as soon as it hits its first obstacle. Guaranteeing the perfect balance between hardness and toughness is the secret of Bellota's quality. This balance is achieved using Bellota Borrodur® steels and through the thorough knowledge of the production process that we have built up over more than 100 years.

Thousands of professionals the world over have had the opportunity to see that working with BELLOTA products makes their tilling work more precise and uniform, produces less breakages and time-consuming stops, with products that have a longer service life. The final result of all this is simply improved profitability.

Vertical Tillage Discs

Part Number	OEM#	Description	Make	To Fit
DIS10039B *	143556	20" X 6.5mm plain	Degelman	Protill
