

Guards

CRITICAL DIMENSIONS FOR PERFECT FIT

- Critical dimensions ensure a perfect fit on your MacDon machine every time, allowing for minimal downtime and quick replacements
- Tapered edge design allows for sickle sections to be replaced without replacing guard
- Perfect fit guarantees optimal cutting performance and extended wear
- Provides perfect guard fit up with cutter bar poly, resulting in proper mounting with the cutter bar

DOUBLE HEAT TREATED CUTTING SURFACES

- Cutting surface is induction hardened providing targeted hardening in high contact areas, resulting in a superior cutting performance
- Harder and more durable than traditional hardening methods provides for higher impact strength and wear resistance

THRU HARDENED FORGED STEEL

- Provides extremely durable metal core throughout which allows for increased wear life and durability
- Thru hardening process results in sharper cutting edges, harder wear surface across entire guard and thinner end points, guiding crop precisely into cutting surfaces

OPTIMIZED CROP GUIDING TANG DESIGN

- Shape of the pointed guard is designed to separate the crop as well as maximize cutting surface to provide superior cutting performance
- Guard tang is engineered to maintain the proper clearance to get the most from your MacDon knife sections

ADJUSTABLE AND SELF CLEANING STUB GUARD

- Fully adjustable hold down maintains tight clearance between guard and section
- Self-cleaning guards are less likely to plug the knife in tough crops such as grasses and canola

Pointed Guard Part Number 118344 (Premium) 118848 (Value) **Stub Guard Part Number 34359 (Premium Top), 118346 (Premium Bottom), 135586 (Value Top), 135575 (Value Bottom), 118351 (Sheet Metal Top)**
