

# Pre-Cut Drapers

WCCO Belting, Inc.

WCCO's patented RAPTOR™ Belting uses 100% polyester filament fabric with a friction coating capability. Filament will always outperform a similar spun fabric with higher tensile, tear and puncture resistance; the fabric is also less volatile in pricing and is more readily in supply.

Until RAPTOR™ technology, it was nearly impossible to friction coat filament fabric because the surface was too smooth for the rubber to form a strong bond. WCCO's draper features a friction coat on the underside of the belt which reduces weight and drag, and it uses a skim coat on the topside of the belt for optimal protection. RAPTOR™ draper belting has higher strength properties, superior durability, and has more stable market pricing compared to other conventional draper options.

WCCO engineered and patented a fabric technology for its RAPTOR® Draper Belting and it is the only draper in the world that measures up to the increasingly high demands of modern harvest equipment.
