

D/FD Series Feed Draper Upgrade

- MacDon Performance Parts has released a new Feed Draper (Part #MCD304454) that has been designed to significantly improve durability and wear life.

PERFORMANCE UPGRADES:

Increased Material Thickness

- The skim coating on the draper belt has been increased, improving the attachment of the cleats as well as the overall draper durability.

Improved Cleat Design

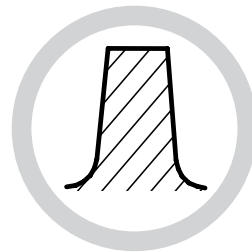

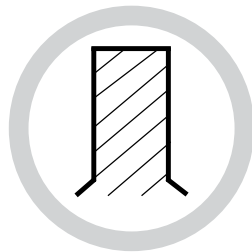

- The cleat design has been changed to a tapered design with a wider base that has a smooth radius at its attachment point. This improves the attachment of the cleats to the drapers, increasing life.

Overall the design changes will extend the draper life in comparison to the old part numbers, and stocking is simplified to one part number for all models. See summary table below:

FEED DRAPER

Header/Float Module (Adapter)	Old Part #	New Part #
FM100 (D1/FD1)	295934	MCD304454
CA25 (D65/FD75)	133131	MCD304454
CA20 (D50/D60/FD70)	133131	MCD304454
